# CHF Spotlight

July Issue | 2017

Hole CB-16-02 encountered 224 m of .403 g/t Au from 20 m to 426 m, Includes the last 18 m of 0.883 g/t Au average

Hole CB-16-03, collared 550 m northeast of Copper Belle Zone, returned 338 m of 0.700 g/t Au from 88 m to 426 m

## Turning Gold Claims into Gold Mines

**Tudor Gold Corp. (TSX.V: TUD & Frankfurt: TUC)** is becoming a substantial explorer in British Columbia's Golden Triangle area, a region containing many past-producing mines as well as several large mineral deposits that are in line for future development. Within the Golden Triangle, Tudor owns a 60% stake in two properties, the Electrum and Treaty Creek Projects, and a 100% interest in the Mackie, Eskay North, Orion, Fairweather, Delta and the High North properties.

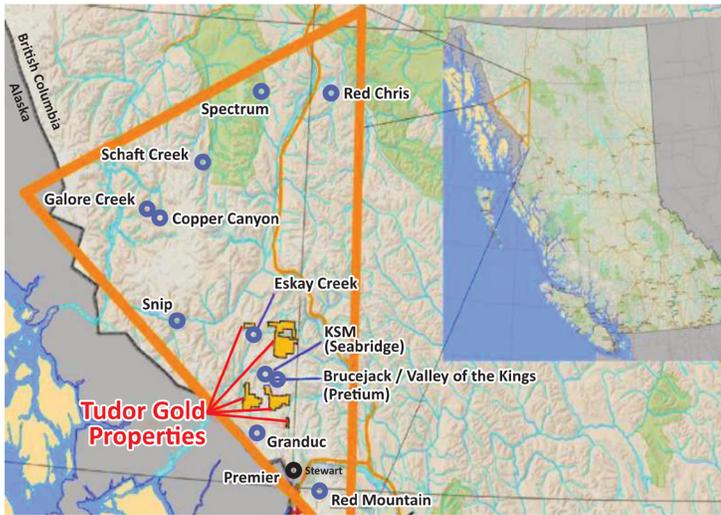

### The Prolific Golden Triangle

Since Canada's beginnings, the mining industry has been a lucrative business for both investors and company owners. One area of much interest and importance in the Canadian mining industry is named The Golden Triangle, which lies near Stewart, British Columbia, on the northwestern side of the Alaska-BC border. This area has since become known for its large gold and other mineral deposits, and is still in its infancy. Mining companies who undertook projects dating back up to 100 years in

this area have produced successful results, with Premier Gold, Snip Gold and Eskay Creek being a few of the notable. Today, many companies still have active exploration projects in this mineral-rich region. In 2015, under direction of Walter Storm, CEO, Tudor Gold Corp. was able to purchase 60% ownership in the Treaty Creek Project and Electrum Project. In addition to these, Tudor Gold also has numerous wholly-owned or earn-in options for other claims, giving the company control over a total of 37,329 hectares in the Golden Triangle.

### Infrastructure in the Golden Triangle

Currently, Tudor's camp in the Golden Triangle is only airborne accessed, but there have been some recent improvements to the area's infrastructure which are beneficial to Tudor's properties, which include the paving of the Stewart-Cassiar highway (Hwy 37) north from Smithers, which will allow Tudor to extend

Project, totaling 41 million oz of gold (M+I+I), and currently holds the title of the world's highest-grade gold deposit in the commissioning phase. Treaty Creek is also very close and hosts very similar geology and mineralization as the Eskay Creek mine.

Drill core from Copper Belle

a nearby road by 15 kilometres to connect the highway with their Treaty Creek camp. The recent completion of a \$700 million high-voltage transmission line will provide Tudor's camp with access to power. In addition to the two completed improvements above, proposed development activities for Seabridge's KSM Project include a 23 km tunnel for delivery of slurry to a processing plant. 12 km of this tunnel (the "Mitchell Treaty Tunnel") will pass through the Treaty Creek property.

There are three main mineralized zones in the Treaty Creek property: GR2, Copper Belle and Eureka. Previous diamond drilling exploration has resulted in significant gold intersects in 18 of the 20 holes in the GR2 zone and 19 out of the 27 in the Copper Belle zone. Since the property was previously under legal dispute by its previous owners, drilling on these zones ceased in 2009 until TUD commenced drilling in 2016. Tudor Gold is ready to commence their exploration plan this year, and as a result of the positive signature of mineralization delineated in a Magneto Telluric Survey that took place in 2016, they know exactly where to drill.

## Treaty Creek Project

The Treaty Creek Project borders two World Class deposits. To the southwest lies Seabridge Gold's KSM Project, which is one of the largest undeveloped gold projects in the world, with 83.5 million oz of gold (Measured + Indicated + Inferred). To the southeast lies Pretium Resources Inc.'s Valley of the Kings

## Electrum Project

The Electrum Project is also located in trend with other major deposits. These are the previously producing Silbak Premier mine, located 25 km south of Electrum, and Pretium Resource's Brucejack mine, 20 km to the north, now in

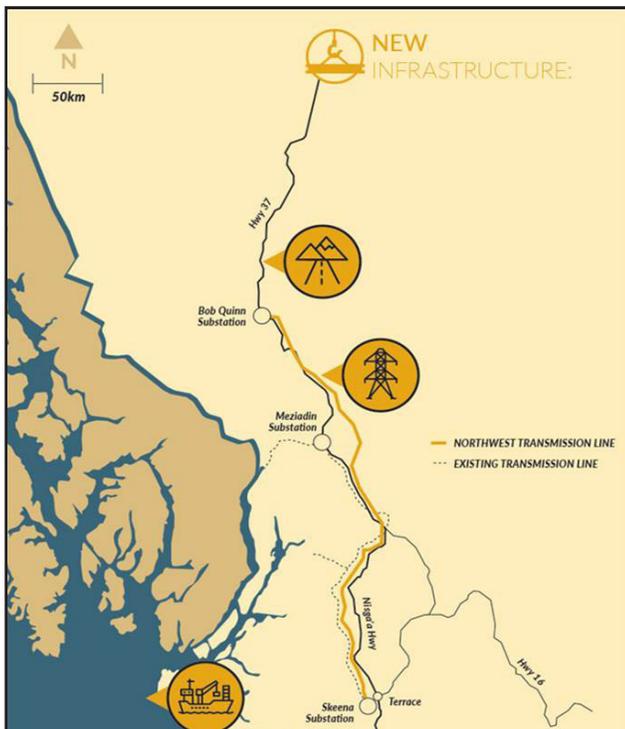

Treaty Creek Project - Main Targets

production. As a result of these adjacent properties, there is already a developed 40 km road that links Electrum directly to the bulk tonnage shipping terminals of Stewart, BC. In addition, electrical power lines are set up within 3 km of the property.

With regard to mineralization for this property, gold occurs structurally controlled in shear zones that produce “bonanza” grades right at surface as well as very shallow Au-Mo porphyry mineralization. Porphyry mineralization is a bonus on that property and refers to large scale disseminated mineralization. These deposits are known to allow for economies of scale and long term mine life, making them less vulnerable to difficult market conditions and being able to experience many market cycles during their production life. Contained within the 650 hectare Electrum property is the famous East Gold mine. During periods of small scale production between 1939 and 1965, this mine produced over 3,800 oz of gold and 2,400 oz of silver from 48.5 select tons of ore. Diamond drilling on the Electrum property confirmed the presence of many gold bearing veins, and blasting for bulk samples took place in 2016 returned very high grade surface samples up to 248 g/t Gold and 27,092 g/t Silver for the Shiny Cliff zone. These results are extremely encouraging.

## Investment Thesis

Tudor Gold is a high impact gold exploration company in the prolific Golden Triangle of BC, founded by Walter Storm who co-founded and financed Osisko, and provides investors with an unique, early-stage opportunity. Their properties are strategically located in trend with Pretium (TSX: PVG) and Seabridge Gold (TSX: SEA, NYSE: SA) and because of this there is a real possibility that one of these major companies will want to either JV with TUD or acquire them outright.

We believe the shares will advance in step with the properties' advancements such as drill results and resource definition. It is also conceivable that Tudor will receive further recognition from some securities firms who are familiar with this high profile mining camp.

**Walter Storm**  
President, CEO & Director

## Meet the President, CEO & Director of Tudor Gold Corp.

Mr. Walter Storm, is a successful business man with more than 50 years of international business experience. Mr. Storm has had successes in many differing industries throughout his career,

but would be most recognised by mining aficionados for his start up financing for Osisko Mining in 2004. Through his work in Eurasia (a German holding company that held majority ownership of Osisko and was acting Chairman of the Supervisory Board), he was able to turn Osisko into a world renowned gold mine with an impressive market cap of CAD \$ 4.5 Billion.

**Cathy Hume,**  
CEO

## Meet the CEO of CHF: Cathy Hume

Cathy is a high profile, Canadian Investor Relations leader. She was an instructor of Ryerson University's course, "Resource Valuation, Financing, and Investor Relations" offered by The Chang School of Business as part of its Certificate in Mining Management. She is also an advisor in External Business for the Ted

Rogers Leadership Centre. Cathy co-chaired Women in Mining Toronto for the past 7 years.

Specializing successfully in providing individually-crafted comprehensive representation to the investment community, CHF serves an international portfolio of publicly-listed companies, operating in a broad range of industries that include mining developers and producers, oil and gas, communications, high-tech, and special situations fields.

**CHF** is recognized as the best full service, cost-effective, outsourced Investor Communications and Capital Markets firm for emerging to mid-cap companies in Canada. By focusing on face-to-face relationships in the investment community, we measure our success through our clients' success. Our business has succeeded due to client retention and industry referrals.
